

1. Excel, SQL Server, SharePoint.
2. Click "Get Data".
3. Click "Refresh" on the Home tab.
4. .csv, .xlsx
5. A preview of tables or sheets in the data source.
6. In Navigator, check only "Product" and "Price", then click "Load".
7. In Power Query, select OrderDate column → right-click → Change Type → Date.
8. "Load" imports data directly; "Transform Data" opens Power Query to edit before loading.
9. Wrong server name, wrong credentials, or firewall blocking connection.
10. Go to "Data source settings" → "Change Source".
11. = Table.SelectRows(Source, each [Quantity] > 1)
12. Click "Transform Data" → "Data source settings" → "Change Source" → select new file.
13. Change column type to "Text" or "Any" in Power Query to fix mixed data type error.
14. Use "Get Data" → SQL Server → use parameter in query or filter after connection.
15. Use Power Automate flow to schedule data refreshes or trigger imports automatically.
