The **Data view** allows you to inspect, clean, and transform your data.
The **Model view** lets you create and manage relationships between tables and define measures or calculated columns.

- **Edit interactions**:

  - Click the slicer → go to **Format** → **Edit interactions**
  - Make sure each visual is set to **filter**.

- **Check relationships**:

  - Go to **Model view**
  - Make sure there's a line (relationship) between the slicer's table and the other tables.

- **Use related fields**:

  - Make sure all visuals use fields connected to the slicer field.
